OBJECTIVE

Aspiring AI/ML Engineer with hands-on experience in building scalable **machine learning, deep learning, and computer vision systems**, including real-time prediction applications. Proficient in Python and PyTorch with full-stack integration skills. Driven to develop high-impact AI solutions that solve real-world problems.

EDUCATION

DARSHAN UNIVERSITY , RAJKOT
B.Tech in Computer Science

2023 – 2027 (Expected)
Current CPI : 8.8

JAWAHAR NAVODAYA VIDYALAYA , RAJKOT
Higher Secondary Education (CBSE)

March 2021 – March 2023
Overall Percentage : 78%

TECHNICAL SKILLS

Core Areas : Machine Learning, Deep Learning, Computer Vision
Programming Languages : Python, Java, C, C#, SQL, JavaScript, HTML/CSS
ML/DL Libraries : PyTorch, Scikit-learn, Pandas, NumPy
Databases : MS SQL Server, MongoDB
Frameworks & Technologies : Next.js, Express.js, NestJS, .NET Core, FastAPI, Flask, React.js
Tools & Software : Git, VS Code, Jupyter Notebook, Kaggle, Google Colab, Postman, Vercel, Render

SOFT SKILLS

Team Collaboration | Adaptability & Quick Learning | Problem-Solving & Analytical Thinking

UNIVERSITY PROJECTS

BRAIN TUMOR CLASSIFICATION SYSTEM

March 2026

Live : neuralscanai.vercel.app | Code : github.com/jaypatel342005/Brain-Tumors-CNN

- Developed a deep learning model to classify brain MRI scans into 4 categories (Glioma, Meningioma, Pituitary, No Tumor) with **~98% test accuracy** on **7,000+ images**
- Benchmarked multiple architectures (**Custom CNN, ResNet18, EfficientNet-V2-S**), achieving best performance using **transfer learning**
- Implemented image preprocessing & augmentation (flip, rotation, normalization) using TorchVision
- Evaluated model using **confusion matrix, classification report, and F1-score**
- Built full-stack application with **Flask/FastAPI backend + Next.js frontend**, enabling real-time predictions with confidence scores
- Tech Stack :** Python, PyTorch, CNN, EfficientNet, Flask/FastAPI, Next.js, Tailwind, Git

CARDIO VASCULAR DISEASE PREDICTOR

December 2025

Live : cardioai.vercel.app | Code : github.com/jaypatel342005/Cardiovascular-Disease-Predictor

- Built an end-to-end machine learning system to predict cardiovascular disease risk using patient health data
- Trained and optimized models using **Scikit-learn** with features like age, blood pressure, and cholesterol
- Performed **data preprocessing, normalization, and EDA** using Pandas and NumPy
- Evaluated model using **confusion matrix, classification report, and F1-score**
- Developed full-stack application with **Flask backend + Next.js frontend** for real-time risk prediction
- Tech Stack :** Python, Scikit-learn, Pandas, NumPy, Flask, Next.js, Git
